

Reduce Emissions Without Risking Quality

Learn how our Technical Service Team worked towards a solution for the customer.

THE PROBLEM

A leading manufacturer aimed to reduce its environmental impact by shifting from traditional BOF steel suppliers to lower-emission EAF sources, while maintaining performance.

THE ANALYSIS

Worthington Steel partnered with the customer and mini mill suppliers to adjust specifications while preserving performance, using strong relationships and technical expertise to ensure the new steel met key operational requirements.

THE SOLUTION

Worthington Steel collaborated closely with the customer, leveraging relationships and technical expertise to guide the process. Internal experts worked with mini mill partners and the customer to modify specifications while maintaining performance standards, ensuring the new steel could meet critical operational needs.

— THE ACTION

When thinking about reducing emissions, contact our Technical Service Team to learn more on how Worthington can help.
